**Reveal Panel**  
System

## Reveal Panel Systems from Metal Solutions

The reveal panel is probably the most popular cladding system for traditional metals such as copper, brass, bronze, zinc, stainless steel, pre-coated aluminium or GreenCoat steel.

Panels can be installed horizontally, vertically or diagonally and can be manufactured in various widths / shadow gap combinations. The reveal panel is also highly effective for use as a soffit system.

The installation is straight forward, one panel interlocking into the next with a concealed fixing.

We offer a complete fabrication service, together with all system components & accessories.

CREATIONS

## Reveal Panels

The Reveal Panel system is ideally suited to situations where traditional metals are preferred but with a requirement for a flatter appearance than standing seam type systems.

The thickness of the panels is commonly 1mm, with widths up to 333mm and joint widths from 0mm to 20mm and 5mm to 20mm for Zinc. Reveal Panels are normally fixed back to timber or metal sub frames with a pressure equalised, ventilated airspace.

Reveal Panels can be produced in Copper, Brass, Bronze, Zinc, Stainless Steel, Precoated Aluminium and GreenCoat steel as well as powder coated Aluminium and Anodised Aluminium.

A standard range of details are available, along with technical assistance on a project by project basis.

## Typical Details

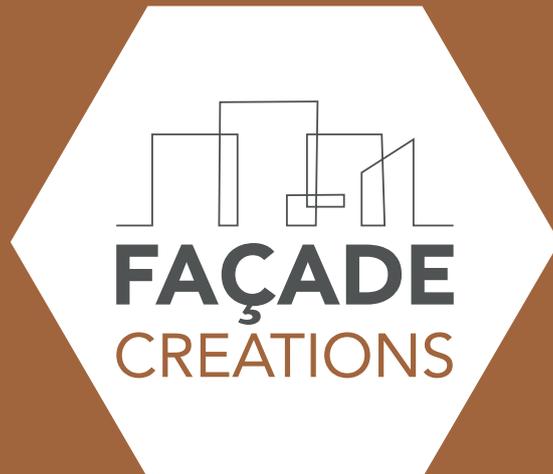

## Bespoke Reveal Panels

**We offer bespoke design and manufacture of reveal panel systems - please contact us for more details.**

This Reveal Panel leaflet is intended as an aid in understanding the Reveal Panel system and refers to standard situations. The general fully supported metal roofing guidelines must be observed. The data contained in this publication is based on our own practical experience and we accept no liability for the accuracy or completeness. We would always advise that project proposals are checked by an engineer prior to installation.
